

Water Activated Paper Tape is Superior to Plastic or Pressure Sensitive Tape

To prove the fact that Water Activated Paper Tape is superior to Plastic or Pressure Sensitive Tape, and that Better Packages electronic dispensers are more efficient than alternate methods of carton sealing, Better Packages went to **SGS Testing, the world's largest independent test lab**, to conduct and supervise testing the tape "security" and the most efficient method of dispensing the tape.

SGS Testing supervised and documented an actual carton sealing process and determined that the Better Packages BP555eSA System was superior to other processes. ***The Better Packages System was 24.5 % more efficient than the Marsh Electra Dispenser and 28.5% more efficient than the standard hand gun application.*** See report # 149698, dated August 26, 2004.

SGS Testing also conducted an independent test to determine the most secure method for sealing a carton. Cartons were sealed and examined for security and evidence of tampering. ***The results were overwhelming; 96% of all water activated taped cartons were secure and tamper evident.*** 96% of the Plastic or Pressure Sensitive sealed cartons were easily opened and resealed without evidence of tampering. See report # 150215, dated August 27, 2004.
